

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office for National Statistics 2002). The number of people aged 65 and over is projected to increase to 16.5 million by 2020, and the number of people aged 75 and over to 8.5 million (Office for National Statistics 2002).

There is a growing awareness of the need to address the health care needs of the elderly population. The Department of Health (2000) has set out a strategy for the NHS to meet the needs of the elderly population. The strategy is based on the following principles: (1) to ensure that the elderly population has access to the services they need; (2) to ensure that the services are of high quality; (3) to ensure that the services are cost-effective; and (4) to ensure that the services are sustainable.

The strategy is based on the following principles: (1) to ensure that the elderly population has access to the services they need; (2) to ensure that the services are of high quality; (3) to ensure that the services are cost-effective; and (4) to ensure that the services are sustainable. The strategy is based on the following principles: (1) to ensure that the elderly population has access to the services they need; (2) to ensure that the services are of high quality; (3) to ensure that the services are cost-effective; and (4) to ensure that the services are sustainable.

The images in this book were scraped from the Internet Archive website. Used for calibrating large book scanners, they automate the process of color correction and the removal of hot spots created by the scanner's lights, and are meant to be read by the calibration software rather than humans.

When present in an Internet Archive entry, the images are stored in an odd file format (.ppm) inside a zip archive called "scandata.zip," from which the title for this book comes. Using a script written in Python, URLs for Internet Archive entries containing these files were pulled from the Bing search engine API, their contents downloaded, and the images converted to JPGs. This collection represents a small fraction of the thousands of such files on Internet Archive's site.
